### GOVERNMENT OF GOA, DAMAN AND DIU

Home Department 'A'

Notification

No. HD-25-167/70-A

Government of India's Notification [No. 39-TAG(42)/70 dated 8-9-1972] is hereby reproduced for general information.

G. M. Sardessai, Under Secretary (Home).

Panaji, 31st October, 1972.

GOVERNMENT OF INDIA

MINISTRY OF SHIPPING & TRANSPORT  
(Transport Wing)

New Delhi 8th September, 1972.

Notification

39-TAG(42)/70

In exercise of the powers conferred by clause (i) of sub-section (10) of section 63 of the Motor Vehicles Act, 1939 (4 of 1939) the Central Government specifies the following, namely:—

The specification for the construction of all metal single deck Delux bus bodies on Leyland Comet 210" wheel base or Tata 205" wheel base chassis shall be as follows:—

#### 1. Main Dimensions:

(a) Overall length of the coach shall not exceed 30'-0" or else the rear overhang of the coach shall not exceed 50 per cent of the wheel base of the chassis.

(b) The overall width of the coach shall not exceed 8'-0" excluding the rear view mirror and Direction Indicator when fitted.

(c) The nominal interior height of the coach shall be a minimum of 6'-0" and in any case, it shall not exceed 6'-3".

#### 2. Body Structure:

(a) The body structure shall be of good quality of steel folded sections. Hat section should be used for the cross bearers, pillars and roofsticks, the thickness of which, should not be less than 10 SWG. and 12 SWG. and 14 SWG. respectively, and they should be in one piece and not welded. All the metal fold sections should be granadised and primed properly.

(b) Adequate number of cross bearers shall be provided with a minimum of 11. The cross bearers shall be of hat section of size 3" X 4" X 2½"-10 SWG. Arrangement for proper support of short cross bearers must be made. The cross bearer should be properly spread depending upon the spacing of pillars adopted.

(c) The side pillar shall be of hat section of size 3-5/8" X 1-3/4" X 1-1/4". 12 SWG. The spacing of pillars may be generally adopted as 56" according to International standards. Stum pillars may be provided wherever necessary for proper distribution of load.

(d) The roof sticks shall be of pressed hat section of size 3½" X 1½" X 1½"-14 SWG.

(e) The floor longitudinal shall be so arranged that the passenger weight shall be carried by structural members of the floor and not by floor board, or floor plate. The floor longitudinal may be of 'C' section of suitable size. At least three rows of floor longitudinal should be provided excluding the sole bar.

(f) The roof longitudinal shall be so arranged that the roof weight shall be carried by roof sticks and not by the roof longitudinals. The roof sticks shall be of hat section of size 3½" X 1½" X 1½" made of 14 SWG. steel plate. A minimum of five rows of roof longitudinal sticks should be arranged suitably.

(g) The pillars to which door hinges as well as the door striker plate are fitted should be of box section.

(h) The front structure should be properly fabricated with a view that the vehicle have more elegant look. The drivers cab should be adequately supported at the front in such a way that the load is not carried by the bulk head, but is carried by the chassis frame.

(i) The luggage boot shall be provided at the rear with adequate space for carrying the luggage of the passengers.

(j) Flat type of door shall be provided at the rear of the coach with facility to open outwards. The battery box and the stepney carrier should be properly located.

(k) Destination boards should be provided below the windscreen bottom level both at the front and at the rear. The cab portion should be completed like the cock pit in the Aeroplane. Mudguard arch should have a minimum of 9" clearance.

#### 3. Body Mounting:

The body will be mounted on the chassis without drilling any holes on the chassis members except at approved place on the chassis side members. Balata backing of ½" thickness should be used between the cross bearers and the chassis. Clamps of high tensile steel not less than ½" diameter should be fitted to the chassis to fasten the body under frame to the chassis. Nyloc nuts should be used for fastening. Wooden pieces of suitable dimensions should be inserted between the webs at these locations.

#### 4. Floor:

The flooring shall be of suitable aluminium floor planks or aluminium plain sheet of 8 SWG. The floor shall be covered with linoleum with pleasing colour. The floor plate should be fastened to the under frame members with ¼" diameter granadised M. S. Hex. bolts and nyloc nuts. The floor plates should be so laid and fastened as to make the floor entirely dust proof.

#### 5. Exterior Panelling:

(a) All the exterior portion including the roof, shall be panelled with 18 SWG. half hard 35 aluminium sheets. The fitment of aluminium panels should be in such a way as to facilitate easy removal of panels for repair, and for replacements.

(b) Solid aluminium rivets should be used for fixing the aluminium exterior panels. Aluminium panel should be quated with dichromate or similar paint at its joints with its steel members. The panelling should be coated with anti-drumming compound of reputed make.

(c) The roof shall be of 19 SWG. half hard aluminium alloy sheets. The joints should be of lap joints riveted through the roof sticks by two rows of rivets at proper pitch. The overlap of the panels should be equal to the whole width of

the roof sticks section. The front panel should always come on the top of the rear panel. After completing the roof panelling the roof should be laid with proper quality of water proof fabric. Water gutter should be fitted at cant rail height to divert drain water. Sky ventilator of proper size should be provided. It should be of tilting type.

#### 6. Interior panelling:

The interior should be fully panelled with half hard aluminium alloy sheet of 18 SWG. thickness and the rivet shall be of solid rivet. The rivet should be so perfect as to hold the interior panelling very rigidly and should be spaced at not more than 3" pitch and spaced at 4" pitch on the roof longitudinals. Anti-drumming compound should be used to prevent drumming effect. Thermocole insulation or any insulation should be provided between the exterior panelling and interior panelling. The truss panels should be fitted in the interior from the waist rail to the sole bar. The truss panel should be of 20 SWG. G.I. sheets.

#### 7. Door and windows:

(a) The windows shall be of unit construction in pan so that the whole window can easily be fixed to the body. The pan may be of pressed aluminium of adequate strength. The window pan should be fixed so as to cover the width of the pillar and should be completely leak proof. The window spacing may be adopted as 56" with double sliding, tinted toughened glass. The window frame shall be Chromium plated to have more elegant look.

(b) Glass panels should be laid in velvet channels for easy sliding and to prevent rattling. Sliding window glass should be provided with suitable catches for easy operation.

(c) The passenger door shall be of at least 30" in width. It should be provided at the front end. The door shall be of flap type and the hinge should be located at the front. The door shall conform to the outside contour of the body.

(d) Emergency exit door should be provided on the off side rear most of the body. The emergency exit door should be so fitted that it should not mar the appearance of the vehicle. It should be provided with suitable locating arrangement enabling the door to be opened both from outside and inside in case of emergency. The driver door should be sliding type instead of conventional hinged type with double sliding glass fitted similar to the passenger windows.

#### 8. Windscreen:

(a) The front, windscreen shall be made of unit construction in pan and shall be glassed with laminated safety glass of 6 mm nominal thickness. The front windscreen shall be suitably arranged so that there will be glazing for the full width to have more elegant look. The rear windscreen should be of full width, nominal thickness of 5 mm. Two rows of guard rail should be fitted inside the rear windscreen. These guard rails must be Chromium plated. Window screen curtain should be provided at the rear and the curtain cloth should be of good silk with pleasing colours. Guard rails should be provided at the interior of the windows. Only one number of guard rail should be provided and it should be Chromium plated.

(b) Door handles should be of sunken type. The lock and tower bolt should be provided both for the driver door and for the passenger door.

#### 9. Front Grill:

The front grill should be electroplated and the body builder can design the grill appropriately with a view to provide elegant look. The front bumper should be of one piece and the rear bumper will have two pieces and the bumpers should be completely electroplated.

#### 10. Grab rail:

Grab rail of 1" diameter (OD) of 12 SWG. tubing duly Chromium plated should be fitted to the ceiling of the bus with not less than 8 brackets (2 and brackets and 6 in the intermediate brackets).

#### 11. Interior Luggage Carrier:

Two light luggage racks should be provided on strong Chromium plated bracket fitted from each pillar for keeping passenger hat and other light luggage. The luggage rack should be fitted at cant rail height.

#### 12. Painting:

(a) All the steel structural framework should be granodised. The whole body should be then spray painted as follows:—

- (1) Primer coat of Red oxide or Zinchromate.
- (2) One undercoat of the respective paint.
- (3) Two finishing coat.

(b) Exact shade of the paint shall be selected by the firm which gives the chassis for body building.

#### 13. Seats and seating layout:

(a) The seating layout shall be two and two on either side with a gangway of atleast 21" in the centre. Each seat shall be of 18" square with independent hand rest either side. The distance between back to back of the seating shall be a minimum of 27" and the total number of seats shall not exceed 30 in Leyland Comet with 210" wheel base and in Tata 205" wheel base vehicle.

(b) The seat cushion shall be of 4½" thickness tapering suitably to the rear and it should be of U-Foam rubber.

(c) The back rest shall be of 2" thickness with reclining type. Seating arrangement must be in such a way that all seats will be facing forward and there should be adequate leg room provided in between the seats. The back rest inclination should be between 95 to 100 degree and in any case should not exceed 105 degree. The seat covering and in any case should not exceed 105 degree. The seat covering shall be of leathertex of good quality with pleasing colour. The colour of the seat should match with the colour of the interior of the coach.

#### 14. Driver seat:

TELCO TYPE (DRIVE EASY) Driver seat should be provided for the driver. A separate seat for the conductor should be provided in the cabin of the bus. The seat shall be so located that it is in line with the driver seat on the near side and the conductor should be able to control the radio etc. mounted on the panel from the seat.

#### 15. Lighting:

(a) The interior of the coach shall be provided with tube lights of 12" length with invertors. Adequate number of tube lights should be fitted to have good illumination. The front and the rear destination boxes should be illuminated with concealed lights of bulbs of 18 or 20W. single contract lamps.

The wiring should be done with 6 mm. L.T. cable on the interior panelling on teakwood stripes, covered throughout in wooden casing in plastic sheathing easily accessible for repairs.

(b) To show the true width of the vehicle, two green lights and a flasher should be fitted on the top from corner of the vehicle.

(c) Three tail lights should be provided at the rear of the coach. Night lamps should be provided at the interior of the coach. At least, two number should be provided.

(d) Double head lights of round shape with blankets on either side should be provided, at the front suitable height for the driver to approach easily during the night time.

(e) At the interior of the coach, a lamp should be provided for each seat with the independent control in the sides of each seat.

(f) Control for lights such as roof lights, tail light, destination box lights, head lights shall be provided on the instrument panel in the driver's cab.

#### 16. Finish of the vehicle:

Two beadings, one at the waist rail level and another at the sole bar level should be provided. The beading provided at the waist rail level should be of adequate width and the beading provided at the sole bar level should be lesser in width. The bottom rail should be provided with grab rail. These beadings should be completely Chromium plated.

#### 17. The following extra fitments should be provided to the Delux buses:

(1) A good quality rear view mirror should be provided on all sides near the driver's seat.

(2) First aid-box made of teakwood with glazed front should be provided in the driver's cab near the conductor seat.

(3) Electric fans of 12" sweep swelling type should be fitted in the interior of the coach at the appropriate place. There

shall be a minimum of 8 numbers of such fans. But, control switch of this electric fans shall be provided on the drivers instrument panel.

(4) Ashtray of tilting type should be provided at the back of each seat.

(5) Provision should be made in the interior of the coach for keeping magazines and newspapers.

(6) A Thermo jug type of water tank with pleasing colour should be provided at suitable place in the interior of the coach.

(7) There should be provision for keeping Coca-cola and other soft drinks in the Ice-box.

(8) The coach should be fitted with tube lighting of concealed system.

(9) Interior of the coach should be panelled with Sun-Mica or Formica instead of the usual aluminium paneling. The Sunmica or the Formica should be fixed plywood panel.

(10) A Radio with loud speakers at least 2 numbers should be provided at a suitable place in the interior of the coach. The Radio control shall be located near the conductor seat on the dash board.

(11) Two good quality mudguard flap of 21" width 3/8" thick and upto 6" ground level for the rear should be fitted.

(12) A frame for holding certificate of fitness and permit (B) of 10" x 7" covered with a glass 1/16" thickness for one side and plywood sheet for the back should be provided. It should be fitted at a convenient place in the drivers cabin.

(13) Good quality Chromium plated License Holder should be provided.

(14) Suitable C. T. C. pump with refill (Fire Extinguisher) along with bracket for the same at a convenient location on the drivers cabin should be provided.

(15) One good quality Sunvisor with ball type joint to enable visor to be moved in any direction should be provided.

(16) Number plate should be provided at the front and rear with a measurement of 12" x 10".

(17) Buzzers should be provided in the interior of the coach with provision for control at four places throughout the length of the coach.

(18) The engine opening should be covered with proper insulation to avoid beat radiation.
